

ACKNOWLEDGMENTS

Large-scale national studies such as this involve substantial effort and support from many individuals and groups. While we cannot easily mention each individual contribution, we would like to highlight the efforts of those who provided substantial assistance.

The study team wishes to express its gratitude to the Bill & Melinda Gates Foundation and the American Library Association (ALA), whose support and participation have made this study and the five previous annual studies possible. With the release of this final report, the *Public Library Funding & Technology Access Study* grant project comes to a close. We greatly appreciate the vision and commitment of the Gates Foundation to advance public access technology in U.S. public libraries.

The study team would like to recognize the significant efforts of the state librarians, the state data coordinators, and other state library staff members. The amount of time, energy, and support the state library community invested in this study contributed directly to the survey's response rate—we cannot thank them enough for all of their efforts.

We extend a debt of gratitude to all the public librarians who completed the survey and participated in the site visits and phone interviews. Without your interest and participation, we simply would not have any data. The time you take to provide the data in this report offers valuable information for national, state, and local policymakers; library advocates; researchers; practitioners; government and private funding organizations; and others to understand the impact, issues, and needs of libraries providing public access computing. The data also provide public librarians with the opportunity to advocate the importance of their library for the communities that they serve.

We also are in debt to the study's Advisory Committee. These individuals assisted us in a number of key areas, including issue identification, question development, survey pre-testing, survey website development, and providing perspectives on study findings. Our thanks to Stacey Aldrich (California State Library), Nancy Ashmore (Prairie du Chien Memorial Library), Robert Bocher (Department of Public Instruction, Wisconsin State Library), Linda Crowe (Peninsula Library System), Christopher Jowaisas (Texas Library Association), Sarah Ann Long (Dominican University), Charlie Parker (Tampa Bay Library Consortium), Rivkah K. Sass (Sacramento Public Library), Mary Ann Stiefvater (Division of Library Development, New York State Library), and Sandra M. Hughes-Hassell (CORS representative).

The study team thanks Norman Rose and Caroline Jewell for the work on behalf of this study; Sara Behrman for her skillful and comprehensive edits; Kirstin Krutsch for her creative infographics; Ben Segedin and Tai Lagodzinski for their skillful design and efficient production of this report.

We would also like to thank Dr. Charles R. McClure, who served as a consultant on this project. Dr. McClure began these surveys in 1994, and he and John Carlo Bertot have worked on the surveys together since that time. Dr. McClure's expertise and continued contributions have served the survey well and are much appreciated.

We thank all members of the Information Policy & Access Center at the University of Maryland and their staff for their help and dedication throughout this entire process. Finally, Paragon New Media also deserves mention for their efforts in developing and maintaining the survey website.
